

CHILDREN'S DENTAL HEALTH MONTH

The background is a teal gradient with white dashed lines and arrows. There are several white icons: a tooth with a cross in a circle at the top right, a tooth outline at the top left, a tooth outline at the bottom left, and a tooth with a cross in a circle at the bottom right. The main text is in large, bold, white capital letters.

CHILDHOOD TOOTH DECAY (OR CAVITIES) IS THE MOST COMMON ILLNESS IN CHILDREN.

It's five times more common in children than asthma! The good news is that it's also one of the most preventable diseases.

Dental care for children may seem quite costly, especially if they have to visit the doctor regularly. However, it is way cheaper and better compared to allowing your children to grow with poor dental health. In the long run, you might end up spending much more money since the dental issues may worsen to become serious dental diseases.

REGULAR DENTAL CHECKUPS ARE IMPORTANT FOR KIDS

Early detection and treatment of tooth decay and other oral health problems is essential for healthy teeth. Going to the dentist for dental exams and hygiene at a young age also helps children feel more comfortable and less stressed out about visiting the dentist.

- Nearly 1 in 5 kids have untreated cavities. ...
- Untreated cavities are more than just a dental problem. ...
- Fluoridated water helps strengthen teeth. ...
- Some kids need fluoride treatments from their dentists. ...
- Tooth decay can start early in life. ...
- Healthy dental habits also develop early in life.
